## Installation

First backup your files and database.

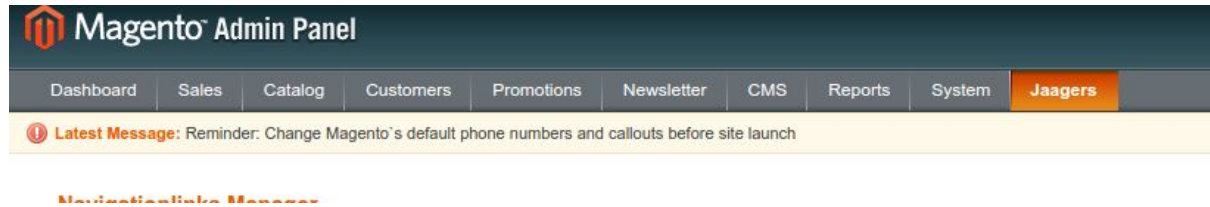

You should always disable “compilation” and flush your cache before starting the installation. Failure to do so will result in significant downtime for your webshop.

Extract the downloaded archive and copy the content to the rootfolder of your webshop.

Afterwards flush the cache again.

# Usage

After installation a new menu will appear in the backend.

Clicking on this menu will show the grid for managing the navigation links. These links will be populated by visiting the accountpage for each store on the frontend. After populating the table it will look as follows:

Navigationlinks Manager

Page 1 of 1 pages | View 50 per page | Total 33 records found

Reset Filter Search

Select All | Unselect All | Select Visible | Unselect Visible | 0 items selected
